Glass is a slow-moving liquid, which is why old church windows are thicker at the bottom.	Incorrect	https://www.scientificamerican.com/article/fact-fiction-glass-liquid/	Claim is incorrect , source from article: “Glass, however, is actually neither a liquid—supercooled or otherwise—nor a solid. It is an amorphous solid —a state somewhere between those two states of matter” --- “ ...Why old European glass is thicker at one end probably depends on how the glass was made. At that time, glassblowers created glass cylinders that were then flattened to make panes of glass. The resulting pieces may never have been uniformly flat and workers installing the windows preferred, for one reason or another, to put the thicker sides of the pane at the bottom. This gives them a melted look, but does not mean glass is a true liquid”
